

June 18, 2021

Good Morning Mr. James,

The Traffic Calming on Walden was requested by the citizen who live or own property that abut Walden Road. After the petition was signed by 75% of those abutting Walden Road a Traffic Study was completed to determine if traffic calming was warranted, which it was and staff began the design of the traffic calming. It was determined that the best approach was to utilize a combination of raised intersections and speed humps along Walden. A Community Meeting was scheduled for March 8, 2021, via Zoom and post cards were mailed out to all the residents that abut the roadway. The proposed design was presented to the residents at the Community Meeting. Attached is the design for the traffic calming which was revised yesterday to ensure that the cross-walks still met ADA and to adjust the grade after the resurfacing. We will double check the last hump on the Mahan end to make sure that it is properly leveled.

We are sorry that this caught you off guard and if you have any further questions, please let me know.

Kim
